Locata[®] warning tape is a brightly coloured non adhesive film printed with a warning message to warn of the presence of buried utilities.

Locata[®] warning mesh is a high strength polypropylene net that is designed to be seen before excavators reach a buried service. Easy to use, it can be printed with a message on its central strip for identification of the service it is marking.

The products are usually installed a specified distance above the service line to provide an early visible warning to excavators. They can also be used in combination with Stokbord[®] Cover or Tapetile[®] utility protection which offer a physical barrier above buried utilities.

- Provide clear visual warning with bright colours and bold warning text
- Resistant to most soil types, including alkaline and acid soils
- Available in a range of widths
- Custom options, including text, colour and language available
- Products available to comply with:
 - ENA TS 12-23
 - EN 12613:2009
- Specified and approved by DNOs

Locata[®] warning tape and mesh are recommended for use to mark the following underground utilities:

ELECTRICITY

WATER

GAS

TELECOMS
